

## Laser Ball 360™

After increased demand, Bike Fit has sourced a great little laser (Just 2.5 inches in diameter!). LaserBall 360™ is the ideal tool for Bike Fitters who want to indicate a straight line, but still be able to stand back away from the customer & assess the overall “big picture.” Used in conjunction with Bike Fit’s velcro **Knee Dot Straps** & you can get that look at people from the front view. Also use like a plumb bob for the side view.... anywhere you need the visual aid of a straight line, use the Laser Ball 360™.

The LaserBall 360™ easy-to-use and takes only seconds to set up. Swivel & rotate LaserBall to project a straight line in any direction. The water bubble level helps you set things up straight.

### Product Features:

Rotate the ball to project either a horizontal or vertical line as desired and adjust the ball in its mounting cup to determine the length of the line. Pointing the laser toward an object will result in a shorter, brighter line – while angling it further away will lengthen the line. With a final check of the bubble level at LaserBall’s center, users can be sure lines are level or plumb. Laser Ball 360 projects a straight laser line in any direction.

### Product Specifications:

Diameter: **2.5 in**
